

Workplace safety evidence under AXIS Object Analytics — not another detector, and no PPE model.

No detection licence. No video leaves the camera.

The problem

Sites already buy Axis cameras and AXIS Object Analytics. When HSE or an ISO auditor asks what happened in a restricted zone last quarter, a VMS clip and an alert log show what happened. They also need a **signed, versioned incident** they can defend — with what the camera could see and whether its clock was right.

How it works

1. **Axis detects** — AXIS Object Analytics reports persons and vehicles (already on the camera).
2. **Prova applies your zones and rules** on the device; images anonymised before they leave.
3. **Prova signs on the camera** — Ed25519; rule and zone versions pinned into the record.
4. **Registry + audit pack** — tamper-evident registry: any later change is detectable; ISO 45001 mapping in the PDF.

Next to AXIS Signed Video. Signed Video makes the footage verifiable; Prova makes the safety record verifiable — which rule fired, where, when and under which version. Prova works beside AOA, Signed Video and the site's video management system, never instead of them.

Three benefits

- **Signed on the camera** — a later zone edit does not rewrite last month's meaning.
- **No video leaves the camera** — one still per incident, anonymised on the camera by the site's policy, or none.
- **Fits the Axis install you already sold** — under AOA; alongside other ACAPs that publish events. You sell cameras and zones; we sell a pack the auditor can open.

Compatibility

Three checks — **not** a catalogue of camera names. Missing from a list is not the same as unsupported. Hard requirement: AXIS OS **12.11 or a later 12.x, or 13** on ARTPEC-8 or ARTPEC-9, with Object Analytics. Below that the camera refuses to install the package. Ambarella CV25 and CV75: supported only after a check on your own camera.

Check	What you need
AXIS OS	12.11 or a later 12.x, or 13 (System → About)
SoC	ARTPEC-8 or ARTPEC-9
Analytics	AXIS Object Analytics
If unsure	Send model + OS in your request — we answer before anyone installs

Channel

Sold with **Axis Solution Partners** in SEE/DACH — not only direct HSE outreach. **We are not TIP-listed today** and will not put a TIP or Gold badge on partner material until that is true.

Starter package: one site, up to 4 cameras, 60 days, €790, credited in full against a first-year order placed within 30 days — check OS first, then install the signed ACAP, then enroll. Contact: hello@techrevati.com · prova.techrevati.com/for-partners
